TIRE BUYING TIP: MANUFACTURED DATE

- Time to replace your tires? Here is a guide to help you.
- You can find out when a tire was manufactured from the sidewall of the tire.
- In the photo on the next slide , the 3507 indicates the tire was manufactured in the 35th week of 07(2007).
- As a general rule, it's not recommended to purchase tires that are more than 5 years old, especially if you patronize used tires. If you have to, make sure you inspect them thoroughly.
- For instance, since we are in 2020, ideally you should stick to tires that have last two digits 15 and above.

3507 indicates 35th week of 2007
